COURSE HIGHLIGHTS

► Case-Based Interactive Audience Response Sessions
► 4 Self-Assessment Module Offerings
► Recommendations for MSK Dilemmas
► Hot Topics in Musculoskeletal Imaging
► Orthopedic Pathology Course
► Musculoskeletal Ultrasound Course
The International Skeletal Society (ISS) invites you to its 45th annual refresher course in Musculoskeletal Radiology. The program is exceptional on numerous counts. All aspects of MSK radiology are covered over three days. The speakers are international experts who have literally written the books on MSK MRI, CT, ultrasound and radiography.

Parallel tracks give participants the option of attending lectures focusing on either sports medicine or other MSK disorders such as neoplasm, infection, arthritis and metabolic disease. In the sports track, lectures emphasize the current thinking about anatomy, physiology and traumatic mechanisms of injury. The program is designed for depth of knowledge. In the MSK disorders track, speakers will address hot topics including bone marrow, peripheral nerves, orthopedic hardware and cartilage. Interventional topics encompass injections, percutaneous treatments and biopsy techniques comparing ultrasound, CT and fluoroscopic guidance.

Here are some highlights:

- Opening session on bone marrow imaging with histopathological correlation
- MSK imaging dilemmas with evidence-based recommendations
- ISS meets DGMSR: imaging of the shoulder
- Self-assessment modules (SAM)
- Interactive audience response sessions (ARS)
- Sports-specific injuries involving joints and muscles
- Rapid-fire presentations on bone and soft tissue tumors
- Traditional film quiz panel

Several optional courses are available. The one-day MSK ultrasound course takes place on Tuesday. Space is limited for the small group tutorials in which participants can scan models under the supervision of experienced tutors. The one-day radiology-pathology correlation course happens on Sunday. Participants in this pathology course are welcome to join ISS members for case presentations during the Members Meeting on Monday and Tuesday.

In 2018, the ISS refresher course will take place in Berlin at the InterContinental Hotel. The InterCon is recently updated and well located in the Tiergarten district of Berlin, minutes from the Zoo, KaDeWe and Bikini Berlin. Berlin is Germany’s largest city and its capital since the reunification of East and West Germany in 1990. Most importantly, Berlin is an extraordinarily vibrant, profoundly historical and cutting-edge cultural city.

We hope you will join us in Berlin.

William Palmer
ISS President
Laura Bancroft
Chair, Program Committee
Andreas Heuck
Chair, Local Organizing Committee

Berlin, the German capital, is renowned for its exceptional variety of attractions, its flourishing cultural scene and a way of life that’s both fast-paced and relaxed. Contrasts between historical buildings and modern architecture, between the traditional and the modern are what set the city apart from the rest. The sights of Berlin – from the Brandenburg Gate to the Federal Chancellery – tell the story of an entire nation.
OVERALL MEETING DESIGN
During this six-day meeting, all attendees are welcome to register for the three-day refresher course, our main educational activity. All attendees can also register for our one-day Pathology Orthopedic Course and Hands-On Ultrasound Course. The Members Meeting, our two-day scientific program, is open to ISS members. The multiple sessions are designed to meet the needs of the multi-disciplinary physicians attending the course. The course focus is targeted towards, pathologists, radiologists, researchers, sonographers, allied health providers and other professionals interested in musculoskeletal imaging.

The primary goal of the refresher course is to provide a rich educational experience for attendees. The wide variety of educational sessions allows participants to remedy educational gaps, regardless of experience or scope of practice. Attendees of the course can expect to gain in depth knowledge of common clinical entities and exposure to uncommon disorders, while also learning of the latest innovations in advanced imaging and therapeutic interventions.

EDUCATIONAL OBJECTIVES
At the conclusion of the ISS 45th Annual Meeting and Musculoskeletal Imaging Course, attendees should be able to:

1. Explain the pathophysiology and imaging findings of commonly encountered musculoskeletal disorders and sports related injuries.
2. Identify appropriate utilization of radiographs, CT, MRI and ultrasound for evaluating musculoskeletal disorders.

ULTRASOUND AND GUIDED INTERVENTION: MUSCLE, NERVE AND FAT
The need for the hands-on ultrasound workshop and lectures has been established from discussions with the ISS program committee, the feedback from past ISS program committee, the feedback from past ISS program committee and past ISS hands-on workshops, and faculty participation in other similar hands-on ultrasound workshops across the world. The topic chosen for this year’s course is ultrasound of Muscle, Nerve and Fat. In addition to didactic lectures, the attendees will participate in hands-on scanning tutorials, allowing the delegates to work in small groups with experts to practice their scanning of muscles, nerves, and fat.

ACCREDITATION
Please visit the website for CME and Sonographer accreditation updates: www.internatonalskeletalsociety.com

EDUCATIONAL NEEDS
Musculoskeletal imaging involves a broad spectrum of pathology including sports related injuries, trauma, arthritis, infection, osseous and soft tissue tumors, and metabolic bone disease. The diagnosis and management of musculoskeletal disorders increasingly relies upon advanced imaging. Further, image guided biopsy and therapeutic interventions play an important role in the management of musculoskeletal disorders. Given these demands, musculoskeletal imagers require ongoing education to maintain an extensive knowledge base, be skilled in state-of-the-art imaging techniques, and understand the latest advances in clinical management.

The refresher course is structured to fully address the educational needs of musculoskeletal imagers. Two parallel tracks in sports medicine imaging and musculoskeletal imaging provide attendees a wide selection of activities to fulfill their individual educational needs. Educational sessions within each track concentrate on specific pathology and anatomic regions. Conventional didactic lectures are supplemented by highly focused “rapid fire” sessions to maximize the educational yield for participants. To facilitate integration of educational material into clinical practice, attendees are encouraged to participate in case interpretation sessions. Interactive events include a film interpretation panel and an innovative “at the PACS” session combining real-time interpretation with didactic materials.

The sports medicine imaging track includes topics reviewing anatomy and pathology of the shoulder, elbow, wrist, hip, knee, ankle and foot. Rapid fire sessions focus on sites of complex anatomy and specific injuries. Special sessions addressing tendon, cartilage, bone and muscle emphasize the evaluation of musculoskeletal structural substrates, affording an in depth exploration of biomechanics, pathophysiology, and advanced imaging. Attendees are assured of an expansive educational experience with offerings that include tendon histopathology, advanced cartilage imaging, pediatric sports injuries, postoperative imaging, and numerous specific sports related injuries.

The musculoskeletal disease track covers a broader array of pathology, acting as both a comprehensive review and update on recent advances. Common musculoskeletal findings are discussed in an introductory “differential and diagnosis” session, with subsequent sessions on trauma, bone and soft tissue tumors, metabolic bone disease and arthritis. Additional sessions address disorders of the spine and peripheral nerves, imaging of orthopedic hardware, and musculoskeletal therapeutic interventions. Advanced imaging techniques are discussed using the popular rapid fire format, including whole body MRI, dual energy CT and metal artifact reduction methods.
